

Download Action Research For Educators

What is action research? Action research is done by teachers to understand their own teaching and students. The most effective action research results in opportunities to improve learning and engagement. Action Research Examples in Education. Teachers interested in studying their own teaching or classroom context often ask for action research examples in education to give them an idea of what types of research can be done. For tutors and action researchers on masters degree programmes interested in classroom research and action reflection see Action planning in improving practice and in generating educational knowledge. See also the Master's Writings. In schools, action research refers to a wide variety of evaluative, investigative, and analytical research methods designed to diagnose problems or weaknesses—whether organizational, academic, or instructional—and help educators develop practical solutions to address them quickly and efficiently.
