Did you take a pregnancy test, get a faint line, and now you find yourself staring at it and wondering if it is positive or not? Did your excitement get the best of you, and you took a pregnancy test before Aunt Flo was due to make her monthly visit? A faint line still indicates a positive pregnancy. According to fertility expert Dr. Aumatma Shah, "A faint result may mean that you took the test too early when there was not enough hCG available in your urine to produce a dark line.
