

# Download Kubernetes Running Dive Future Infrastructure

Legend has it that Google deploys over two billion application containers a week. How's that possible? Google revealed the secret through a project called Kubernetes, an open source cluster orchestra...Zac September 30, 2015 at 3:18 am. Awesome, awesome read. If I could put in a request for a future writeup (since I'm so impressed with this and others on your site): Subnetting and Docker Networking for Developers. Google has been running containerized workloads in production for more than a decade. Whether it's service jobs like web front-ends and stateful servers, infrastructure systems like Bigtable and Spanner, or batch frameworks like MapReduce and Millwheel, virtually everything at Google runs as a Kubernetes is arguably the most important container management technology in the world. This course will teach you the theory and practical skills required to get you up and running as fast as possible., Kubernetes Running Dive Future Infrastructure.
